

Instructions version 1.06 (02/12/2013)

## English installation instructions

-----

Download the apk file on your android device and run it from your file manager. Don't forget to enable the setting which allows non market applications, to run on your device. Without this setting you will not be able to install the application. Otherwise download it from Google application store.

## Short application description (msSMS v1.14)

-----

The mfsms application handles SMS messages only. No MMS support, so far. Apart from sending and receiving messages to one or multiple recipients, multiple times, it could encrypt/decrypt messages. The encryption/decryption is symmetric and it is required the same application on both sides. Version doesn't matters so far. It supports SMSes with maximum length 160 chars from any UTF8 keyboard. Additionally, it supports smilies(around 35 figures), Smpp(generic implementation) web connections and Http(specific providers) web connections. Schedule messages are supported only for Http providers. Language locales, Greek, English and Russian as well as help. It supports android versions from 2.2(Froyo, api 8) up to version 4.4(Kit Kat, api 19).
